

AVAILABLE FOR ORDER NOW!

April 2012

RapidVet®-H IC for determination of Feline A, B and AB blood is available for order now in kits of 5 or 10 tests, with the kit for determination of Canine DEA 1.1 positive or negative blood expected to follow shortly.

Item # HFIC05	Feline A, B or AB	5-test kit
Item # HFIC10	Feline A, B or AB	10-test kit
Item # HCIC05	Canine DEA 1.1	5-test kit
Item # HCIC10	Canine DEA 1.1	10-test kit

Previewed at this years' North American Veterinary Conference, the newest addition to the RapidVet Family of Products was received with great interest by veterinarians and technicians alike.

Employing advanced, immuno-chromatographic (lateral flow) technology, the **RapidVet®-H IC** blood typing test offers a cleaner, easier method of in-office blood typing. The sleek hand-held device contains three membranes, each of which captures red blood cells only under a specific set of conditions, and utilizes a diluted whole blood sample and a special diluent to transport the sample along each membrane. The cell capture technique enables clear, rapid blood type determination, even in patients with low PCV or auto-agglutination.
